Dear Dr. Simpsons,

I wished to express my gratitude for accepting me for the MIT Masters in Biology program. I understand you have a packed life, and I thank you for taking the time to meet me and share some of the factors that make MIT remarkable.

The discussion with you gave me a better understanding of what to expect from the show. I liked the way MIT has genetics testing laboratories on campus as well as research opportunities. Serving in a scientific research lab for the past couple of years, I have observed a few instances. The laboratory has equipped me over the next evolutionary step in my career, which is earning a university degree to research bacterial pathogens.

Thank you again for the time and thought, and I eagerly await your final verdict.

Sincerely,

Nora Williams
